[Detailed Description of the Invention]

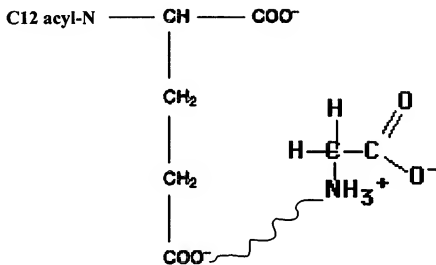

[0001]

[Field of the Invention] This invention relates to the detergent composition blending N-methyltaurine alkali metal salt of fatty acid, or N-methyltaurine organic alkali salt as an essential ingredient.

[0003] Although the soap by weak bases, such as triethanolamine of fatty acid and lysine, is also used in consideration of foaming and a feeling of jarring in neutral vicinity, The foam quality out of which the amine-like odour by a weak base portion comes worsened, and it had a problem of the dissolving point (Krafft point) that admiration is hard to be obtained being unable to blend with a low solid product at all.
